

AGRI BEDDING

Flax

Composition

100 % chopped flax stems

Characteristics

- Low dust
- Reduced odour and fewer flies and insects: the ammonia is retained on the stable floor by the absorption capacity of the flax straw.
- High absorption capacity: 12 times more than straw, because flax straw absorbs up to 450%.
- Much less manure because of good composting: flax litter composts up to 75%
- Due to its neutral pH value (in contrast to sawdust) flax litters are optimal as useful fertilizer for your meadows and fields.
- Easy to spread in the boxes

Packaging

Walking floor poured loose

95 m³

11 ton

WOOD SAWDUST

Composition

100 % white, sawdust

Packaging

Kg/ Bale	Dimensions bale (l x w x h)	Bales/ Pallet	Pallet	Cover
